

PRODUCT RELEASE ANNOUNCEMENT

AVAILABLE NOW:

RECTIFY cannabis infused suppository

D.O.H. COMPLIANT

Fairwinds releases the second suppository in a series and the first designed for both men and women. Each suppository product within the series is unique in its formulation and optimized to achieve specific physiological support.

Rectify is a rectal suppository that is designed to support the health of your gastrointestinal system. It may be especially helpful to those who are challenged with IBS/IBD, Crohn's, Colitis, prostate health, as well as men or women seeking daily wellness, in an ingestion form far more efficient than inhalation or oral consumption.

The human gastrointestinal tract houses all components of the endocannabinoid system, including cannabis absorbing CB1 and CB2 receptors. So it is not difficult to understand the tremendous support & value suppositories offer, especially when supporting GI health.

The suppositories are individually packaged, easy to use, quick to absorb, fast acting and are not designed to provide a psychoactive effect. The CBD, THCA & THC cannabinoid ratio and terpene profile are optimized to support relaxation and comfort. Rectify utilizes only all natural ingredients including organic cocoa butter, sustainably farmed Shea butter, cannabis oil extracted from flower and natural herbs chosen for their synergistic relationship with cannabis.

The benefit of suppositories:

Studies have shown that suppositories provide a 2x absorption efficiency over inhalation and 3x absorption efficiency in comparison to Oral consumption. Vaginal and rectal suppositories are very fast acting, often within 10-15 minutes, with effects often lasting 4-8 hours, however absorption and response varies based on individuals.

Avoiding the gastrointestinal tract prevents first-pass metabolism by the stomach and liver (which metabolize many different molecules into inactive

compounds) allowing the active constituents to reach the blood in much higher concentrations. The liver transforms approximately half of THC ingested into the significantly more psychoactive metabolite 11-Hydroxy- Δ^9 -tetrahydrocannabinol. This molecule causes much more intense cognitive effects than THC. Vaginal and Rectal administration not only avoids these effects, but also allows a much greater proportion of CBD and THC to reach the blood stream.

Fairwinds Mfg is a licensed Washington State legal cannabis company that focuses on health and wellness inspired products with an emphasis on clean-room technology cultivation and science-based solutions as well as product and technology development. In accordance with Washington State Liquor and Cannabis Board regulations we cannot make medical claims or provide medical advice.
